

# HOT WORK

## Description:

Welding, cutting, soldering, grinding, and working with hot air gun, etc. increases the risk of sparking and fire. According to the insurance companies safety regulations, all persons performing hot work at a temporary workplace and also fire protection managers, permit bodies and fire guards must be trained. Participants learn to take preventive measures in case of fire hazardous hot work, so the risk of fire or other damage are minimized. The training follows Fire Protection Association's curriculum. After approved theoretical test, participants receive the Fire Protection Association's hot work certificate. The certificate is valid for 5 years.

*Lipac is a member of Brandskyddsföreningen, and certified organizer for Hot Work.*
